

John Smedley

BS JHU 1994

PhD SUNY SB 2001

I have worked at the intersection of accelerator physics and materials science for more than two decades, at BNL, LANL and now SLAC. I have worked with most modern photocathodes used as sources in accelerators. I have been a user at all of the major synchrotrons in the US, and several abroad, along with LCLS and SwissFEL. My group uses the light sources of today to enable the light sources of tomorrow.
